

Boc-NH-PEG-COOH

Catalogue No.: abx085057

Polyethylene glycol (PEG) compounds contain a polyether unit, commonly expressed as $R_1-(O-CH_2-CH_2)_n-O-R_2$. They are generally biocompatible, non-toxic and stable in both organic and aqueous solutions, and so are extensively used in biological applications, as well as nanotechnology and materials research. Proteins with PEG chain modifications and compounds encapsulated in PEG liposomes exhibit a longer half-life *in vivo* than their non-PEGylated counterparts, a phenomenon known as PEG shielding. Functionalised PEG lipids and phospholipids can be used for protein-PEG conjugation.

Boc-NH-PEG-COOH is a linear heterobifunctional PEG reagent with one Boc protected amine and one carboxyl.

Target: Boc-NH-PEG-COOH

Form: Solid

Purity: $\geq 95\%$ (1H -NMR). Product conforms to structure by 1H -NMR.

Storage: Store between 0 and $-5^\circ C$. Avoid exposure to light. Ensure the vial lid is sealed when not in use.

Shelf Life: 12 months.

Note: THIS PRODUCT IS FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC, THERAPEUTIC OR COSMETIC PROCEDURES. NOT FOR HUMAN OR ANIMAL CONSUMPTION.
